

# Design of Concurrent Code

Main design rule for concurrent code in Android:

Presentation layer logic should use UI thread exclusively!

Presentation layer logic:

UI logic

Android controllers (Activities, Fragments)

Standalone controllers (controllers, presenters, ViewModel's, etc.)

No multithreading in these entities!

# Design of Concurrent Code Summary

Main design rule for concurrent code in Android:

Presentation layer logic should use UI thread exclusively!

UseCase classes (also known as “interactors”) can encapsulate multithreaded flows

MVC:

ViewMvc

Activity

UI Thread

UseCase

ViewMvc

Activity

Controller

UseCase

MVP:

Activity

Presenter

UseCase

MVVM:

Activity

ViewModel
