

Exceptions Handling in Coroutines

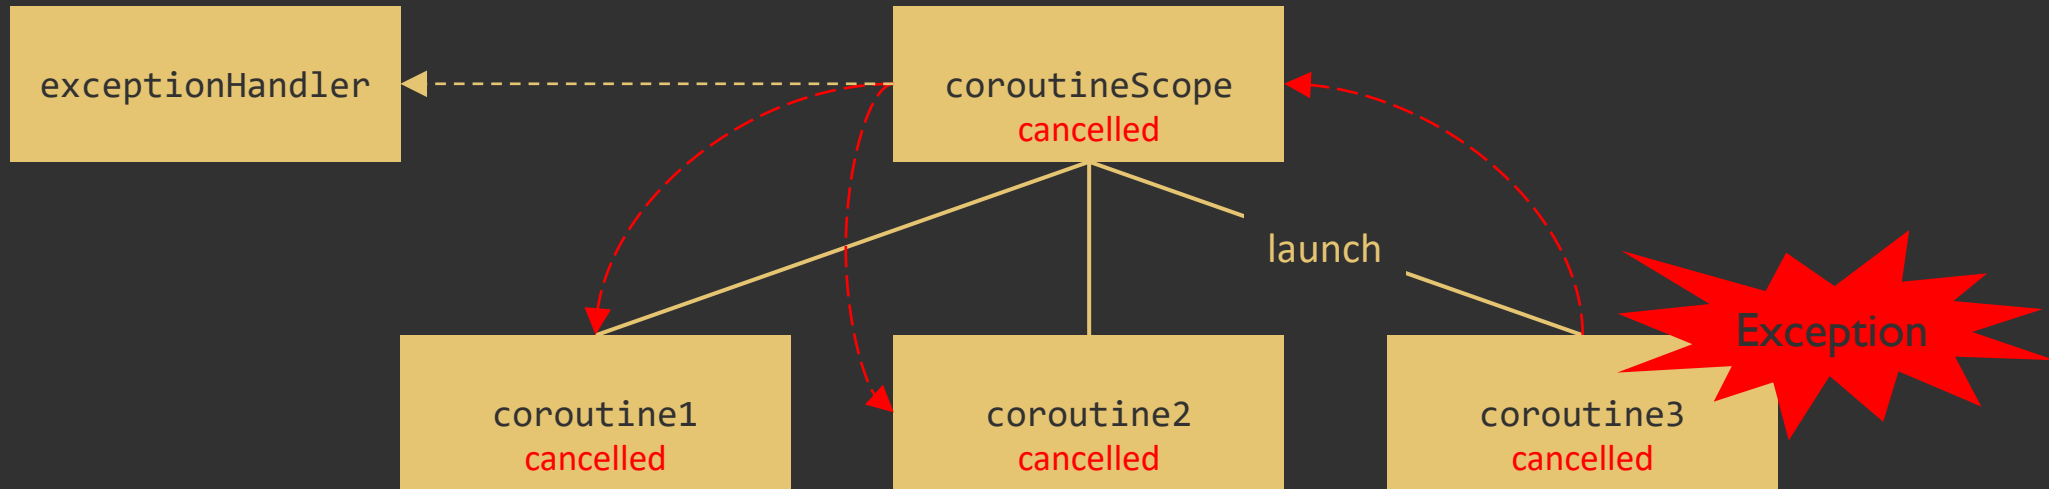

Uncaught Exception == Error*

* except for CancellationException

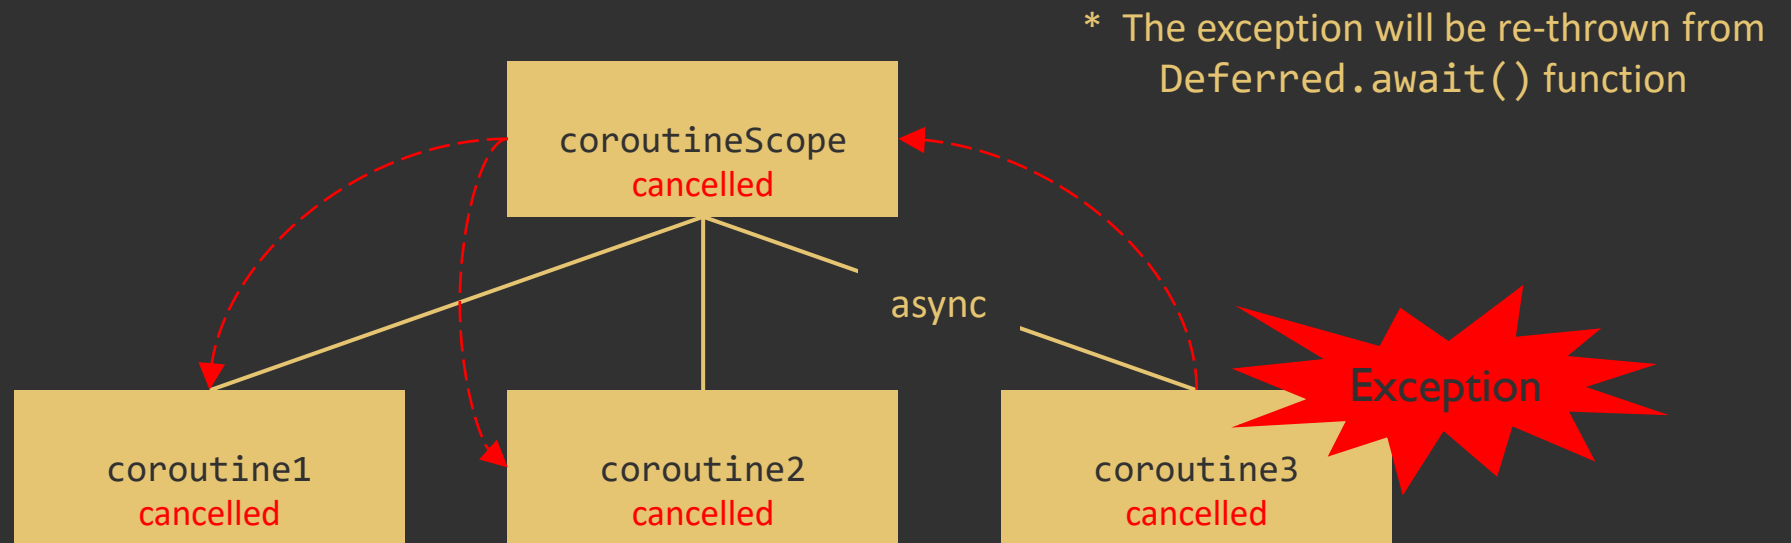

Exceptions handling is probably the most challenging aspect of
Coroutines framework

Exceptions Handling Summary

Exceptions in launch:

Exceptions in async:

You can install SupervisorJob into CoroutineScope to prevent scope's cancellation when child coroutine fails

All potentially thrown exceptions should be documented!

The best way to handle exceptions in coroutines is to catch them locally and prevent their propagation to CoroutineScope
